

TQWT

95 db 2-way High-Efficiency Speaker System

JA8008/TW034 kit is designed for people who enjoy low-wattage, high-class valve amplification, but it can obviously be connected to any high-quality system, being valves or solid state. This extended-range 8" driver has numerous applications from high-efficiency 2-way TQWT designs to midrange driver in high-efficiency 3-way systems supplemented by suitable 12-15 inch bass drivers.

The last ten years has seen an enormous rise in the number of valve amplifier manufacturers. To fully enjoy the qualities of e.g. 2A3 or 300B triodes, high-efficiency speaker systems have to be found and there clearly is a shortage of options available in the loudspeaker market. .

DTQWT

95 db 3-way High-Efficiency Speaker System

The DTQWT Kit is an extension of the TQWT kit by adding two 10" Eminence DeltaLite 2510 bass drivers.

The front and rear drivers load a central horn and deliver an astonishingly deep and powerful bass response.

The kit can be delivered with a wide range of crossover components to suit personal taste and budget.

Should you aim even higher the kit can be used with two 12" Eminence DeltaLite 2512 bass drivers to further enhance soundstage.

The most popular kit from Jantzen Audio.

QUATTRO

90 db 2-way Compact High-Efficiency Speaker System

Should the TQWT and DTQWT be too voluminous for your living room, you can enjoy the qualities of the JA8008/TW034 combo from this 40 litre compact standmount speaker.

Special crossover circuitry allow bass extension down to 40 Hz from the vented enclosure.

The QUATTRO delivers a ruler flat frequency response and is recommended for studio recording as well where a well balanced presentation of your recording is required.

As for TQWT and DTQWT the simplest possible crossover circuitry has been developed to render the highest level of transparency.

JBL L100 Crossover Up-Grade Kit

A true renaissance kit for the many JBL lovers.

Experience a significant improved sound from your vintage L100 speakers.

The James B. Lansing L100 Century studio-monitor became the largest selling loudspeaker model of any company in the Seventies. By the end of the decade, recording studios in the United States used more of JBL's monitors than all other brands' monitors combined. Due to the materials used, the L100 drivers are as good today as when they were produced, but the overall sound can be vastly improved by modern crossover technology. Jantzen Audio is proud to offer an up-grade kit for this legendary loudspeaker.

Tannoy Monitor Gold MG15 Up-Grade Kit

Latest addition to the Jantzen Audio portfolio of high-efficiency kits and Up-Grade Kits for vintage speaker.

The Tannoy Monitor Gold MG15 and MG12 have near cult status among those enjoying the cream of vintage drivers.

Where the JBL L100 kit is a completely redesigned crossover, the MG15 Up-Grade Kit follows the original schematics closely and in fact reuses the coils for the tweeter high-pass filter. However, during crossover development it was discovered that the original low-pass section for the bass driver was anything but ideal, thus a revised topology is presented improving driver integration and transparency.

The MG15 can be delivered with a wide range of components to suit personal taste and budget, from Superior Z-Caps to the very best Silver/Gold caps available. Foil coils wound on wax impregnated paper are recommended.
