

## Disclaimer regarding DIY speaker kits

- All DIY speaker kits are delivered as components for self-assembly only
- We do not offer fully assembled speakers, cabinets or any of the cabinet materials
- For both the “open” and “closed” DIY kits, these must be bought as a complete DIY kit, with all crossover components, accessories and damping materials included
- We can however offer to exclude some, or all of the drivers, in the DIY kits
- The schematics and component values list for the “closed” DIY kits are not sold separately
- We offer customization of DIY kits in relation to upgrading components, but we do not offer to downgrade components to a lower standard than specified for the specific designs by Mr. Troels Gravesen
- Any changes to speaker units (drivers) or any other design or layout changes that differs from the original design, is done on the customer’s own accord.  
We cannot offer technical support if the original drivers and design layout is not kept
- The DIY kits come with a printed instruction containing a component list with values, the crossover schematic and a crossover component placement drawing in relation to the crossover boards
- We do not offer any step-by-step picture guides / videos or complete manuals for any of the DIY kit designs
- All DIY kits are sold under the presumption that the customer has previous experience with speaker building, hereunder crossover assembly and cabinet making
- All DIY kit content is added in the amounts specified for the exact build instructions by Mr. Troels Gravesen. Extra damping materials, wires and accessories can be purchased if the builder wants to add more of these items than included in the DIY kit as standard
- For all technical questions, kindly contact Mr. Gravesen ([troels.gravesen@hotmail.com](mailto:troels.gravesen@hotmail.com))
