

JANTZEN AUDIO

Disclaimer for the suitable application of Jantzen Audio products

- All Jantzen Audio products are only intended for home application on passive speaker crossovers and other related areas
- For professional audio application, kindly contact us for a dialogue about application, as our products may not be suitable for use in all PA systems or other professional audio applications
- Our induction coils, capacitors and resistors are only suitable for application on passive speaker crossovers. For the capacitors specifically, these are also suitable for home use amplifiers (exact type of approved amplifier application, varies for each capacitor model).
- If our products are used in other audio related application or in non-audio application than specified above, our product warranty will not cover damage to our products, other products, or collateral damage to anything related to the incorrect application of our products where they are not intended for use
- We do not offer advice or technical assistance if our products are used in any other application that specially outlined above
- **Custom induction coils:**

We only offer custom induction coils based on inductance (L) and as a function of (L) the RDC target value.

Please note:

Our promised tolerances for induction coils only relate to the induction figure (L), we do not offer promised tolerances on the DCR figures for our induction coils.

We **do not** offer to make custom inductors based on number of turns, sizing (\emptyset / H / Inner \emptyset) or any other requirements not relating to inductance and RDC.
