

# JANTZEN AUDIO

## Disclaimer regarding DIY speaker kits

- The “closed” DIY kits can only be bought directly from Jantzen Audio. The crossover schematics and the list of component values for the “closed” DIY kits are not sold separately and are only obtainable when purchasing the DIY kit.
- The DIY kits must be bought with all crossover components included. If you already have some of the drivers, the kit can be bought with only some of the drivers included, as needed. We can offer to exclude the accessories and damping materials on request, however, please make sure you can source similar damping materials locally, before excluding it from the DIY kit (density and damping properties have to be very similar).
- We offer customization of DIY kits in relation to upgrading the capacitors only. We do not offer to downgrade any components to a lower standard than specified in the minimum kit version / level.
- All DIY speaker kits are delivered as components for self-assembly. We do not offer fully assembled crossovers, cabinets, or the cabinet materials.
- The DIY kits come with a printed instruction containing a component list with values, the crossover schematic and a crossover component placement drawing in relation to the crossover boards. We do not include any step-by-step picture/video guides or complete manuals for any of the DIY kit designs.
- All DIY kits are sold under the presumption that the customer has previous experience with speaker building, hereunder crossover assembly and cabinet making.
- Any changes to speaker units (drivers) or any other design or layout changes that differs from the original design, is done on the customer’s own accord (including converting a passive construction into an active version). We cannot offer technical support if the original drivers and design layout is not kept.
- All item quantities included in the DIY kits are to Mr. Gravesen’s exact specifications. If the speakers are not built exactly to Mr. Gravesen’s specifications, any additional materials needed to complete the speakers are not supplied free of charge.

**Please send all technical questions directly to Mr. Troels Gravesen**
