

Illumina 66

Designed by Troels Gravesen

“For bass I have chosen the 4 ohms version of the 18WU range.

4 ohms voice coil makes a more responsive driver for the same gain setting of your line stage by drawing more current from your amplifier, but no decent solid state amp will have trouble driving this speaker because it can't play immensely loud anyway.

50-100 good solid state watts will do and my 80 wpc Jungson amps just love this speaker.”

Can be built with either the D3004/60000 or R3004/62000 tweeters.
